                                                                                                                                                                                                                                                                                                          The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and polypeptides are also useful for isolating compounds with cytostatic polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14-JAN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26798) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 189

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded potentially preventing breast cancer.

       The invention relates to methods to detect the filamentous runy. Byssochlamys nivea, Neosartorya fischeri and Zygosaccharomyces bailii PCR amplification on genomic DNA using primers derived from the ribosc internal transcribed spacer (ITS) sequences (see AAT49351-6). This sequence represents the ITS1 from N. neosartorya and is amplified by primers AAT49359-60. The method is used to detect heat resistant primers AAT49359-60 because which are important contaminants
                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1997-034393/03.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      31-MAY-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-DEC-1996.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                       The present sequence was used in a method for generating RNA-protein CC fusions, which comprise a protein covalently linked to the 3' end of its cown mRNA. The fusions are made by synthesis and in vitro or in situ translation of an mRNA molecule with a peptide acceptor attached to its C3' end. The RNA-protein fusions are incubated under high salt conditions cto produce a protein library. This method is useful for improving or CC altering existing proteins, as well as for isolating new proteins and cnucleic acid or small molecule targets. It may also be used to improve human or humanised single-chain antibodies for the treatment of a number of diseases. The method is useful for the isolation of proteins with genes on the basis of protein, for screening cDNA libraries and cloning new genes on the basis of protein interactions. Unlike prior art, the new method does not rely on maintaining the integrity of an enthod seems the protein and the nucleic acid so that the information of the between the protein and the nucleic acid so that the information of the protein is retained and can be recovered in readable, nucleic acid form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                          altering existing proteins, as well as for isolating new proteins and nucleic acid or small molecule targets. It may also be used to improve human or humanised single-chain antibodies for the treatment of a number of diseases. The method is useful for the isolation of proteins with specific binding properties, for screening cDNA libraries and cloning new genes on the basis of protein-protein interactions. Unlike prior art, the new method does not rely on maintaining the integrity of an mRNA:ribosome:nascent chain ternary complex, which is very fragile and is therefore of limited use. The method does not rely on topological links between the protein and the nucleic acid so that the information of the protein is retained and can be recovered in readable, nucleic acid form

                                                                                                                                                                                                                    translation of an mRNA molecule with a peptide acceptor attached to its 3' end. The RNA-protein fusions are incubated under high salt conditions to produce a protein library. This method is useful for improving or
                                                                                                                                                                                                                                                                          The present sequence was used in a method for generating RNA-protein fusions, which comprise a protein covalently linked to the 3' end of own mRNA. The fusions are made by synthesis and in vitro or in situ
                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 72; 121pp; English.

CC expression, comprising any of the 27,400 fully defined nucleotide CC sequences in the specification, or their complements or fragments, and CC encoding at least 8 amino acids of any of the 6888 amino acid sequences CC fully defined in the specification. The probe is a single exon probe that CC hybridises under high stringency conditions to a nucleic acid molecule CC expressed in human cells or tissues. Also included are a spatially-CC addressable set of single exon nucleic acid probes for measuring human CC gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately CC and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of CC probe cited above, an ORP-encoded peptide comprising at least 8 CC contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid contiguous amino acids of any of the above- mentioned amino acid substitutions), an CC contiguous amino acids of any of the above- mentioned amino acid substitutions), an CC contiguous amino acids specifically to appetide cited above, or solated antibody that binds specifically to appetide cited above, or solated antibody that binds specifically to appetide cited above, or solated antibody that binds specifically to appetide contain the expression and appearance of providing contains a database having a plurality of records contain second second contains a database having a plurality of records contain their specifically to appear the single exon microarrays. In addition, the probes are used in identifying and chara
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human genome-derived single exon nucleic acid probes useful for gene expression analysis, for identifying or characterizing alternatesplicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 21853; 80pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             137
```

gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above- mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above,

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe the hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human reasons according to the second second probes for measuring human reasons.

that

New human genome-derived single exon nucleic acid probes useful for gene expression analysis, for identifying or characterizing alternat splicing events, for assessing genomic alterations or as tools for

alternative

human

The probe, methods and apparatus are useful in gene CC expression analysis. The probes may be used as tools for surveying CC tissues to detect the presence of expressed messages that contain their CC specific exon, or in constructing genome-derived single exon microarrays. CC In addition, the probes are used in identifying and characterising CC alternative splicing events, in detecting and characterising gross CC alternative splicing events, in priming the synthesis of nucleic acids, CC or in expressing the ORF-encoded peptide. The present sequence is a human CC single exon probe of the invention. Note: The sequence data for this cCC patent did not form part of the printed specification, but was obtained CC in electronic format directly from USEPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC nucleotide sequence from a genome of an organism corresponds to a contile sequence of an open reading frame; for preparing a contig, concleic acid molecule from a genome of an organism; and for sequencing call or part of a genome of an organism. mRNA is obtained from mammalian cor human cell which is associated with a pathological condition e.g. a colon cancer or breast cancer cell. The method is useful for analyses of colon cancer or breast cancer cell. The method is useful for analyses of colon cancer or breast cancer cell. The method is useful for analyses of colon cancer or breast cancer cell. The method is useful for analyses of colon cancer or breast cancer cell. The method is useful for analyses of colon cancer and so forth. The method can be used to study living cystems to determine if, e.g. there have been genetic shifts which render can individual or population more or less likely to be afflicted with congenital diseases, and the risk of affliction to a feetus, as well as the study of whether the conditions are likely to be passed to offspring chrough ova or sperm. The analyses for pathological conditions can be carried out in all animals, plants, birds, fish, etc. Using this method, in the area of agriculture, for example the genomes of food crops can be studied to determine if resistance genes are present, defects in plant condergone shifts or mutations, which may require different approaches to crypanosomes, different types of plasmodium, etc. The method essentially climinates sequencing of non-coding portions. This sequence represents a colymnucleotide isolated from human colon cancer cell cDNA library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                             CC nuclectide sequence of an open reading frame; for preparing a contig.
CC nucleic acid molecule from a genome of an organism; and for sequencing
CC all or part of a genome of an organism; and for sequencing
CC all or part of a genome of an organism; and for sequencing
CC or human cell which is associated with a pathological condition e.g. a
CC colon cancer or breast cancer cell. The method is useful for analyses of
CC populations of subjects and can be used to carry out genetic analyses of
CC systems to determine if, e.g. there have been genetic shifts which render
CC an individual or population more or less likely to be afflicted with
CC diseases such as cancer, to determine antibiotic resistance or non-
CC congenital diseases, and the risk of affliction to a foetus, as well as
CC the study of whether the conditions are likely to be passed to offspring
CC carried out in all animals, plants, birds, etc. Using this method,
CC in the area of agriculture, for example the genomes of food crops can be
CC studied to determine if resistance genes are present, defects in plant
CC genomes can also be studied in this way. Similarly, the method permits
CC undergone shifts or mutations, which integrate into the genome, such as
CC therapy. This method is also applied to eukaryotic pathogens, such as
CC trypanosomes, different types of plasmoddium, etc. The method essentially
CC eliminates sequencing of non-coding portions. This sequence represents a
CC colonicated from human colon cancer cell cDNA library

                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included.
                                                                                                                                                                                         06-OCT-2000
                                                                                                                                                                                                                       AAC12537
                                                                                                                                                                                                                                                     AAC12537
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 181 BP; 35 A; 35 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                             Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Corn; seedling-derived polynucleotide; cdp; ss; plant; seed growth; seed development; disease resistance; insect infestation; fungal disease; bacterial infection; disease resistance infest in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Corn seedling-derived polynucleotide (cpds), SEQ ID 4668

                                                                                                                                                                                                                                                                                                from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                   Sequence 185 BP; 30 A; 65 C; 61 G; 29 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
